

*(Original specification marked up for amendments)*

## **DOUBLE ANCHOR STRAPLESS DILDO**

### **1. Field of the Invention.**

This invention relates to dildos for vaginal insertion.

5

### **BACKGROUND OF THE INVENTION**

### **2. Relation to prior art.**

There are a wide variety of known sexual-gratification items that include dildos for vaginal insertion. There are none known to be strapless for female-to-female use as taught by this invention.

10

### **SUMMARY OF THE INVENTION**

Objects of patentable novelty and utility of this invention are to provide a double-anchor strapless dildo having a vaginal anchor and a rectal anchor for reliably rigid and gratifying insertion into a first female to support a penal-like dildo for being gratifyingly inserted into the vagina of a second female in a manner taught by this invention.

15

### **BRIEF DESCRIPTION OF DRAWINGS**

This invention is described by appended claims in relation to description of a preferred embodiment with reference to the following drawing which is explained briefly as follows:

20

**FIG. 1** is a side elevation view.

### **DESCRIPTION OF PREFERRED EMBODIMENT**

A description of the preferred embodiment of this invention follows a list of

numbered terms which designate its features with the same numbers on the drawings and in parentheses throughout the description and throughout the patent claims.

- |                    |                           |
|--------------------|---------------------------|
| 1. Insertion shaft | 8. Anal-anchor protrusion |

| 7. Circular base   | 14. Terminal end          |

Referring to FIG. 1, a double-anchor strapless dildo has an insertion shaft (1) extended intermediate an attachment base (2) and an insertion end (3). The insertion shaft (1) has length and breadth for gratifying insertion into a vagina of a first female.

The attachment base (2) has an anal anchor (4) and a vaginal anchor (5). The vaginal anchor (5) has length and breadth for gratifying insertion into a vagina of a second female. The anal anchor (4) and the vaginal anchor (5) are extended predeterminedly from an attachment side of the attachment base (2) with the vaginal anchor (5) being intermediate the anal anchor (4) and the insertion shaft (1).

The anal anchor (4) -is articulated- has breadth for ease of insertion into an anus of the second female and form for deterring escape from -an- the anus of the second

female.

The vaginal anchor (5) -is articulated- has breadth for ease of insertion into the vagina of the second female and form for deterring escape from -a- the vagina of the second female.

- 5        The anal anchor (4) includes a conically circular point (6) having a circular base (7) that is extended radially outward from an anal-anchor protrusion (8) -that is- extended from the attachment side of the attachment base (2). The conically circular point (6) is blunted and elongated predeterminedly for ease of entry into and gentle spread of -an- the anal orifice of the second female. The conically circular base (7)
- 10       includes a rounded edge -that is articulated- for hooking bluntly onto an inside of an entry wall of the anal orifice of the second female.

The anal-anchor protrusion (8) can include -includes- a length that is proximate a thickness of the entry wall of the anal orifice of the second female.

- The vaginal anchor (5) can include -includes- a vaginal-anchor shaft (9) having
- 15       -a- length, breadth and shape for gratifying insertion -predeterminedly- into the vagina of the second female.

The vaginal-anchor shaft (9) preferably includes a predetermined vaginal-anchor head (10) formed and structured proximate a terminal end (14) for stimulating entry into and linear positioning within the vagina of the second female.

- 20       The vaginal anchor (5) -includes- can have a -predetermined- vaginal-anchor hook (11) proximate a base end of the vaginal-anchor shaft (9). The vaginal-anchor hook (11) is formed and positioned -and articulated- for engaging forward walls of the

vagina -that are supported by- and for engaging bony structure of the symphysis pubis  
of the second female.

-While the circular point (6) of the anal anchor (4) is a direct and independent  
deterrent to escape of the strapless dildo, the length and a slight curve of the vaginal-  
5 anchor shaft (9) function in combination with the circular point (6) to arrest pivotal-  
escape travel of the vaginal-anchor shaft (9). The length and a slight curve of the  
vaginal-anchor shaft (9) are synergistically gratification factors of the vaginal anchor  
(5).-

The -insertion end (3) of the- insertion shaft (1) can include at least one -a-  
10 predetermined insertion-shaft head (12) formed and positioned on the insertion shaft  
(1) for engaging erogenous zones of the vagina of the first female.

The double-anchor strapless dildo is preferably rigid, washable, sanitizable and  
surfaced optionally smooth or softly irregular predeterminedly.

The insertion shaft (1) is -articulated- structured for -detering- deterrence of  
15 lateral pivot by double anchoring with the anal anchor (4) and the vaginal anchor (5).

The attachment base (2) is -articulated- formed for deterring unwantedly loose  
linear travel of the insertion shaft (1) in the vagina of the first female by -spread-dual-  
double anchoring with the anal anchor (4) being buttressed by aft bony structure of  
the anus of the second female for deterring -rearward- forwardly loose linear travel  
20 of the of the insertion shaft (1) in the vagina of the first female and the vaginal-anchor  
hook (11) being buttressed by the bony structure of the symphysis pubis of the second  
female for -preventing- detering rearwardly -forward- loose linear travel of the

insertion shaft (1) in the vagina of the first female.

The attachment base (2) can be formed -is articulated- for deterring unwantedly loose -vertical- lateral travel of the -insertion shaft (1)- vaginal anchor (5) in the vagina of the second female by the -spread-dual- double anchoring with the anal-  
5 anchor (4) being buttressed by the aft bony structure of the anus of the second female -for deterring vertical travel- and the vaginal-anchor hook (11) being buttressed by the bony structure of the symphysis pubis of the second female. -for preventing unwanted vertical travel of the insertion shaft (1), verticality of the vertical travel being proximately common to an axis of the vagina.-

10 The anal anchor (4) -in combination with a- and the vaginal anchor (5) are juxtaposed laterally from proximate a base end (13) of the insertion shaft (1).

-Selection of structure of length, thickness and distance of separation of the insertion shaft (1), the anal anchor (4), the vaginal anchor (5) and the attachment base (2) can be included as articulation for deterring unwantedly loose vertical, linear and  
15 pivotal travel by spread-dual anchoring with the vaginal-anchor hook (11) being buttressed by the aft bony structure of the anus for deterring vertical travel and the vaginal-anchor hook (11) being buttressed by the bony structure of the symphysis pubis for preventing unwanted vertical travel of the insertion shaft (1), verticality of the vertical travel being proximately common to an axis of the vagina and the linear  
20 travel and the pivotal travel being proximate orthogonal to the axis of the vagina.-

-The insertion shaft (1) is articulated for being maintained in a desired position proximate a vagina of a female body by an anal anchor (4) in combination with a

vaginal anchor (5) which are juxtaposed laterally from proximate a base end (13) of the insertion shaft (1).-

-Preferably, the double-anchor strapless dildo is made of dishwasher-safe material having a predeterminedly smooth exterior surface.-

5        A new and useful double-anchor strapless dildo having been described, all such foreseeable modifications, adaptations, substitutions of equivalents, mathematical possibilities of combinations of parts, pluralities of parts, applications and forms thereof as described by the following claims and not precluded by prior art are included in this invention.

# DOUBLE ANCHOR STRAPLESS DILDO

## ABSTRACT OF THE DISCLOSURE

A double-anchor strapless dildo has an insertion shaft (1) formed for insertion in a vagina of a first female by a second female to whom the insertion shaft is double-

5 anchored with an anal anchor (4) and a vaginal anchor (5) on an attachment base (2). The insertion shaft is formed and optionally surfaced for desired contact with

erogenous areas of the vagina of the first female. The vaginal anchor is formed and optionally surfaced for desired contact with erogenous areas of the vagina of the

second female. For combining attachment rigidity and contact with erogenous areas of the second female, the attachment base has a vaginal-anchor hook (11) formed for

10 engaging bony structure of the symphysis pubis and for engaging erogenous entry walls of the vagina of the second female while being double-anchored to the second

female with the anal anchor and the vaginal anchor. -for insertion into the anus and a vaginal anchor (5) for insertion into the vagina of a first female to provide reliable

15 double-anchor strapless attachment to the first female in addition to providing gratifying action of the vaginal anchor for the first female by also providing a second

female with gratifying vaginal insertion and action of the insertion shaft by the first female.-
